

# Mix 28 Wall Mount Bracket

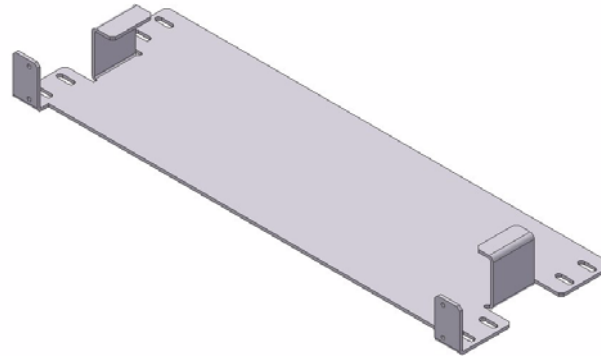

## Installation Guide

### 1.1 Installation

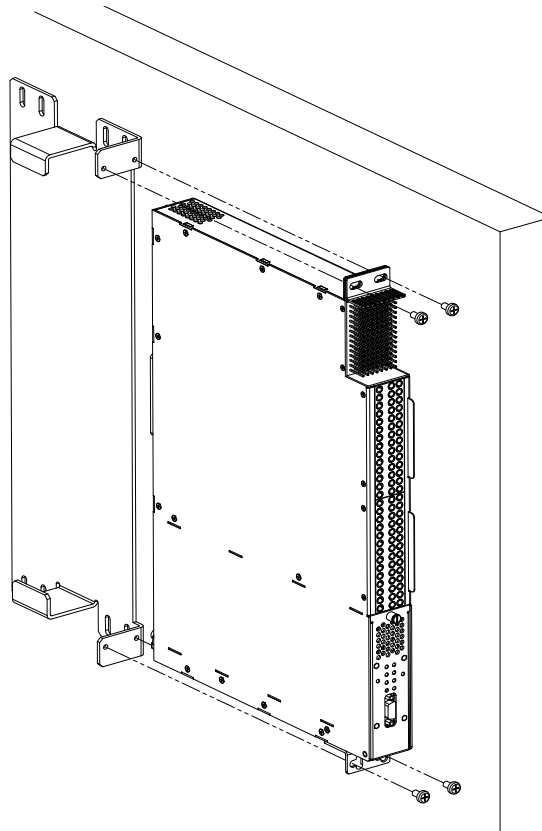

Telect's 1RU wall-mount bracket holds one 1RU 19-in. Mix 28 panel against a wall or side of a cabinet. The bracket allows both front and rear access to the panel and maintains a minimum footprint. Hardware to mount the panel to the bracket is included with the panel. Wall mounting hardware is not included.

A typical wall installation for a Mix 28 panel (p/n 747-2800-0000 is the chassis only) is shown here. Telect recommends including a minimum 2 ft. (600 mm) service loop in any cabling or wiring intended for the rear of the panel.

If applicable or required, install a ground wire on the panel as you would when installing the panel in a rack.
